

Data Means Business

Kalle Lyytinen, M.Sc. (Tech.), Civil Engineering

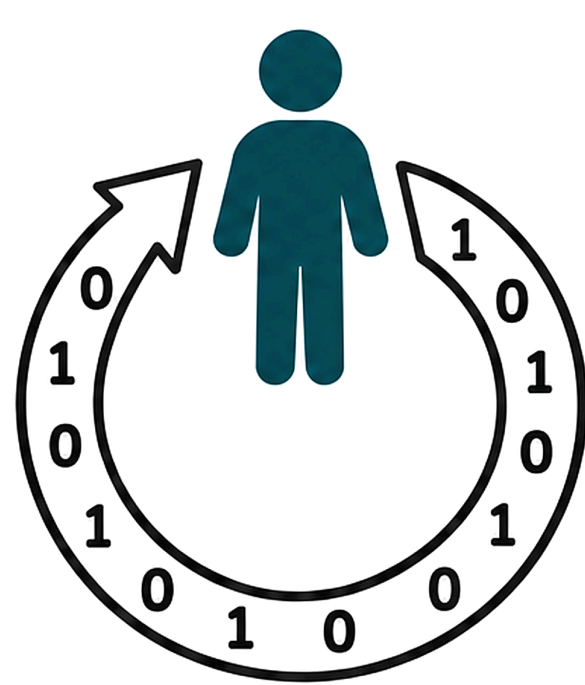

Studying data engineering and business at the University of Eastern Finland

Thesis partner wanted:
I turn your data into profitable business.

25 years in infrastructure design, international software delivery and construction management. Now applying data and AI to engineering and business problems: actionable results that turn into revenue, wellbeing and sustainability.

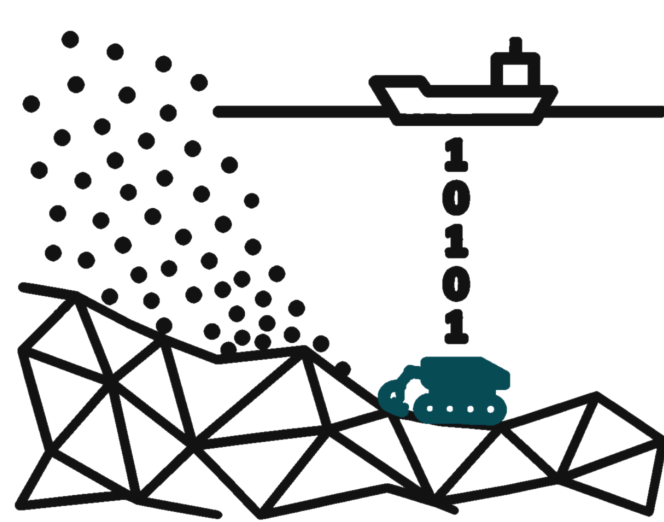

No data skills, no return.

I trained client teams across EMEA to turn design data into decisions and software into return.

Client training · design data · adoption

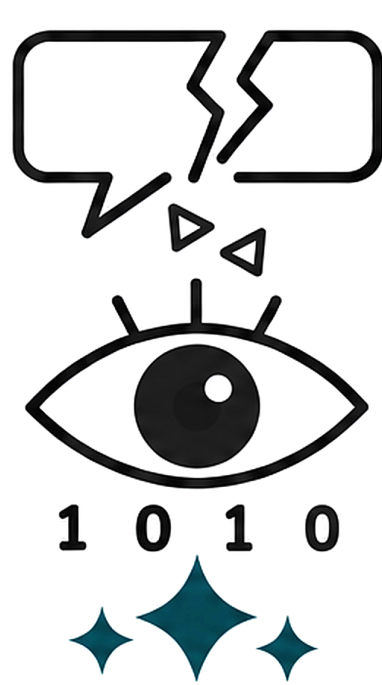

Seabed data guided a robot.

I turned ROV survey points into a TIN seabed model sent directly to machine guidance. Team in Bangkok, me at sea.

Ormen Lange · 3D data · international delivery

I stumped AI. It got smarter.

I evaluated frontier-model outputs and turned expert STEM judgement into structured feedback.

Outlier · human-in-the-loop QA

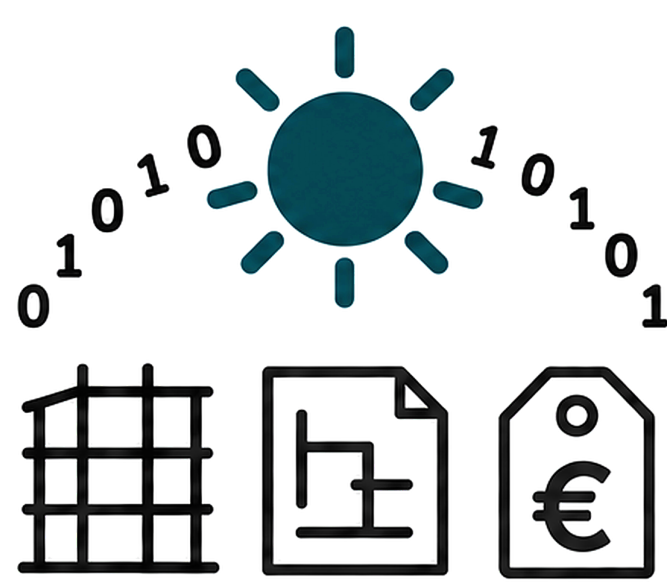

Secure data access = income

I found paid content exposed without login. I rebuild its access control on Azure.

Azure · Entra ID · access control

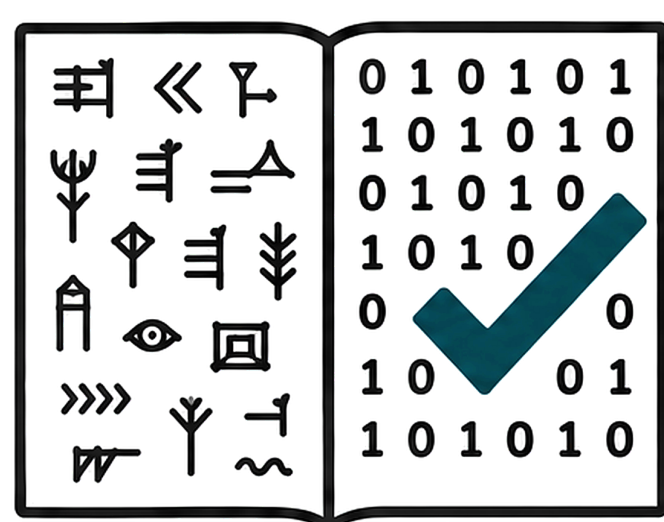

BIM. Drawings. Price. One day.

Using MCP prompts, I produced a Revit model, drawings and order-coded quantities.

Paid assignment · Revit · BIM

Paper hides. Data proves.

I moved site quality control from paper to mobile cloud checklists, with weekly standard reports.

Construction management · reporting · digital QA

Trusted with
client data

Board-to-coder
bridge
